

Building up moments.

MASTERTENT®

Mastertent Rescue Package

Ready when every
second counts...

Rescue Sidewalls.
Essential for critical workflow, easy operating, **quick-access doors** with dual-side zippers and roll-up fastening. **Multi-function windows** with triple layers of versatile screens and covers. Lower third of wall protected in **heavy-duty PVC** with all-weather extensions for rugged conditions.

Anti-Slip Floor.
Ready for any environment, the floor system is made of no-slip woven PVC. Heavy-duty and perfect for keeping water out and sensitive liquids in. Extended perimeter to securely connect Rescue Sidewalls for extreme conditions.

Connection System.
Quickly and securely connect the Anti-Slip Floor to the Rescue Sidewalls. Extended connection flaps and a combination of quick and easy tubes, cords and stakes provide a strong foundation.

Insect Screen.
With the door closed, the built-in insect screen ensures good ventilation, sufficient light, and prevents insects from entering your Rescue canopy tent.

Transparent PVC.
Easily close the clear PVC layer to protect the interior from the elements: wind, rain, colder temperatures, etc while still letting the natural light in.

Privacy Cover.
For protection against prying eyes, the window can be closed from the inside with a solid vision-proof cover.

The First Responder's Best Friend

The Rescue canopy tent system, specifically designed for front line, first responder and civil service operations, provides weather and privacy protection in a fast, reliable, mobile solution. In critical situations, police, fire, medical and military services can rely on Mastertent.

Thermo-Vent Tent Interior

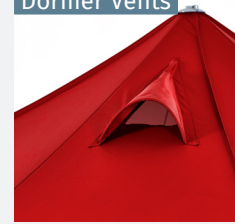

Stay cool and focus on the mission.

The Rescue Package can be equipped with an optional **Thermo-Vent Tent Interior**. Together with the external sidewalls and roof, the tent interior creates an insulated air chamber. This airflow pocket helps control the temperatures of the tent interior - keeping the inside more comfortable, even when the outside temperatures are extreme.

Heat testing at an outside temperature of 88°F (31 °C):

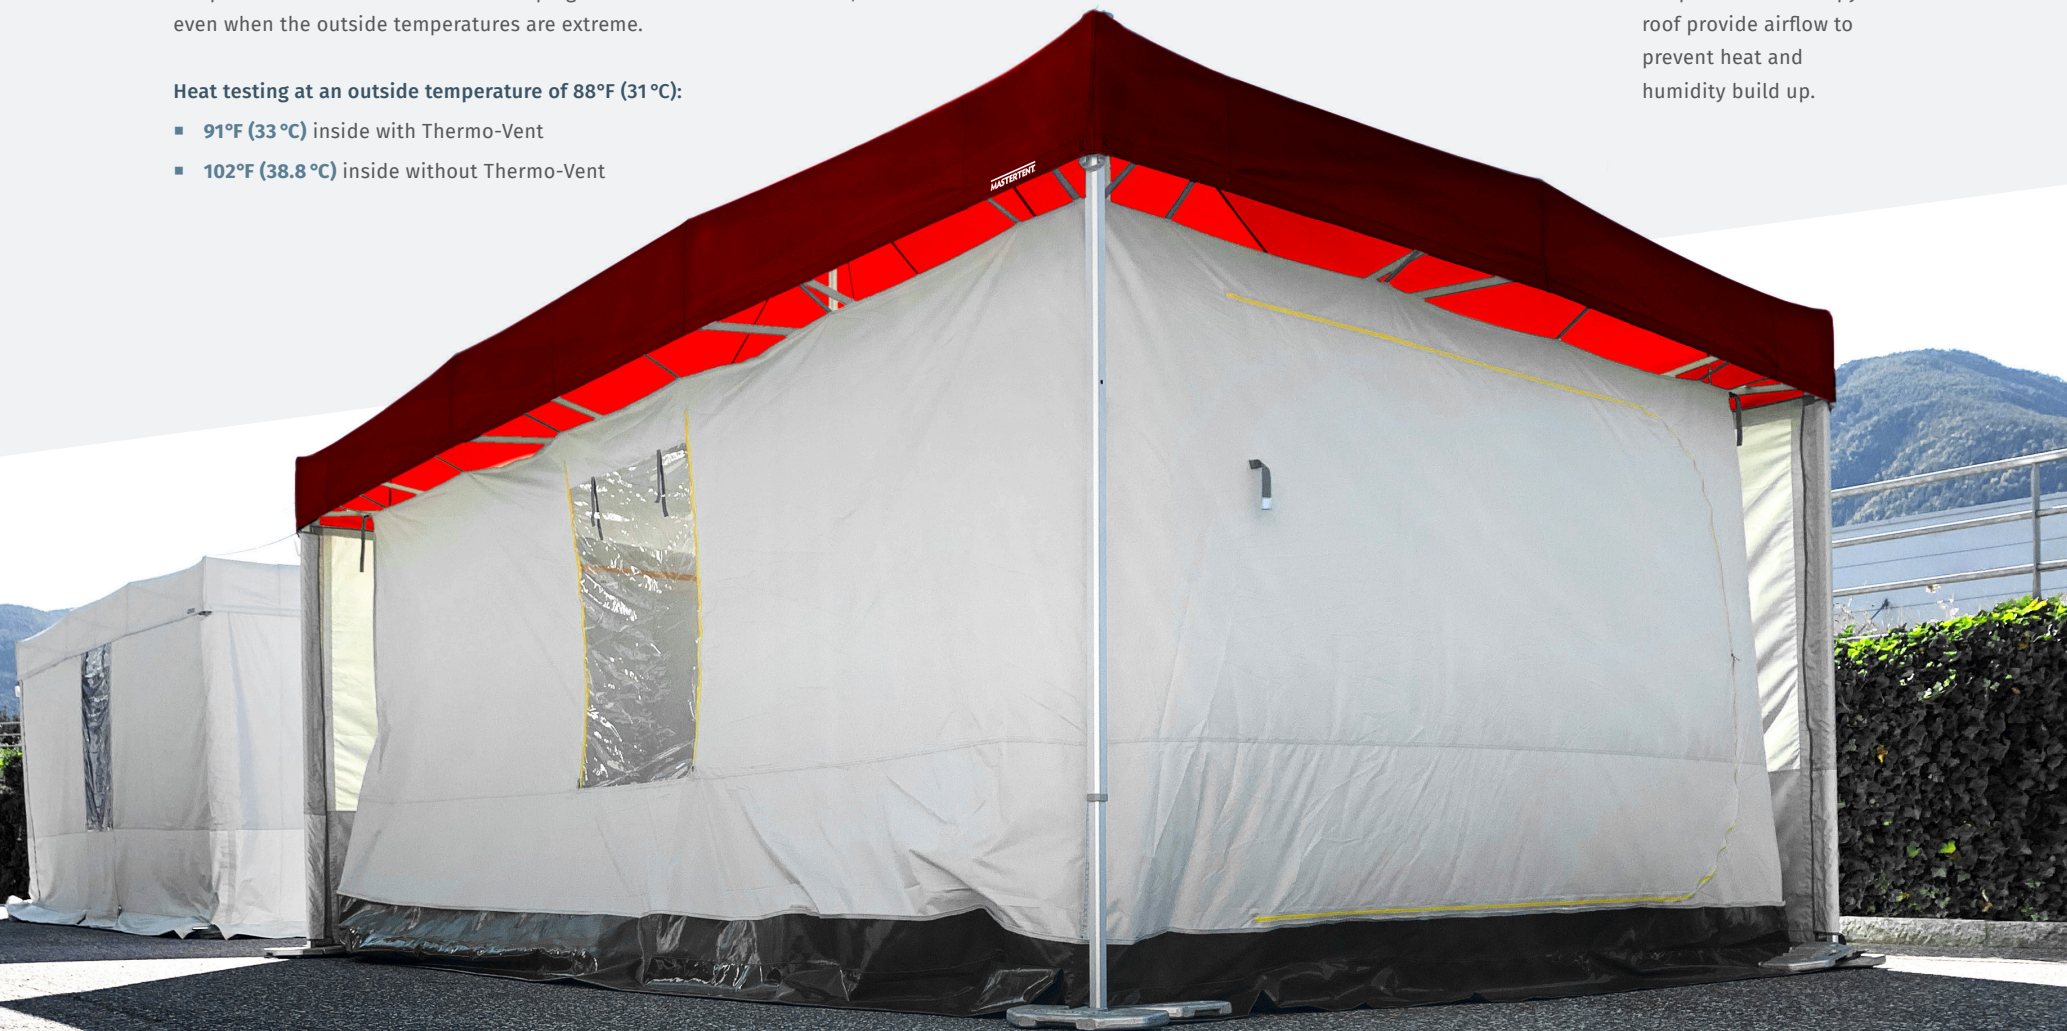

- **91°F (33 °C)** inside with Thermo-Vent
- **102°F (38.8 °C)** inside without Thermo-Vent

Dormer Vents

Airflow for a perfect balance.

The dormer vents at the peak of the canopy roof provide airflow to prevent heat and humidity build up.

Be Mastertent-ready

*The bravest first responders
deserve the most reliable support.*

Easy-Up

Extremely fast deployment.

Fast and easy set-up. No tools to assemble, no loose parts to unpack. Mastertent tents are ready for action in seconds.

Fire Retardant

Fire safety is important to us.

Mastertent canopy tents are certified fire-retardant to be one less thing for our bravest to worry about.

Manufacturer

In-house production.

All of our canopy tents are built in-house by Mastertent. High-quality, custom-made solutions that are quickly produced and delivered.
