

Building up moments.

**MASTERTENT**<sup>®</sup>

The Mastertent Kit Rescue

Perfect, when every  
second counts...

**The doors** can be opened by means of a zip fastener and then be rolled up. The lower third of the sidewalls is made of PVC. This extension provides ideal resistance to external influences.

**The gazebo floor** is made of anti-slip-PVC. It is attached to the frame and sidewalls by a connecting system.

**Connecting tubes** keep the tent well tensioned. To create a closed unit, they can also be anchored with pegs.

**Privacy protection.** To protect against prying eyes, the window can be closed from the inside with an opaque cover.

**The integrated fly nets** ensure good ventilation, sufficient light and prevent insects from entering the gazebo.

**Windows.** The rescue sidewalls are equipped with special doors and windows which can be opened quickly by means of a zip fastener.

## The first responder's best friend.

The Kit Rescue gazebo, specially designed for rescue operations, provides weather and privacy protection. In critical situations police, rescue services and fire brigade can always rely on Mastertent.

## Interior tent

# Our cooling accessories, heat doesn't bother Mastertent.

The Kit Rescue can be equipped with an optional **inner-tent**. Together with the sidewalls of the outer tent it forms an insulating air chamber. On the one hand, this reduces the rise in temperature inside the tent and on the other hand it ensures that it does not get too cold, even on frosty days.

Heat test at an outside temperature of 31°C:

- 38,8°C in the Kit Rescue without inner-tent
- 32,0°C in the Kit Rescue with inner-tent

## Dormer window

**Perfect balance  
between the inside  
and outside.**

The dormer window at the peak of the roof prevents the accumulation of heat under the roof. The humidity formed inside the gazebo can escape easily.

Mastertent was there

# Even the bravest first responders deserve some support.

## Easy-Up

### There's no faster way!

The set-up is easy and fast. No tools are needed. Thus, a Mastertent gazebo is ready for action in a few seconds.

## Fire retardant

**We leave nothing to burn!** Our gazebos are fire retardant, proven by our official certifications.

## Manufacturer

### We are manufacturers!

All gazebo components are processed directly by us. Therefore we can offer custom made solutions and a fast delivery.
